OXFORD WORLD’S CLASSICS

For over 100 years Oxford World’s Classics have brought readers closer to the world’s great literature. Now with over 700 titles—from the 4,000-year-old myths of Mesopotamia to the twentieth century’s greatest novels—the series makes available lesser-known as well as celebrated writing.

The pocket-sized hardbacks of the early years contained introductions by Virginia Woolf, T. S. Eliot, Graham Greene, and other literary figures which enriched the experience of reading.

Today the series is recognized for its fine scholarship and reliability in texts that span world literature, drama and poetry, religion, philosophy and politics. Each edition includes perceptive commentary and essential background information to meet the changing needs of readers.

EDGAR ALLAN POE

Selected Tales

SELECTED TALES

MS. Found in a Bottle 3
Berenice 13
Morella 21
Ligeia 26
The Man that was Used Up 40
The Fall of the House of Usher 49
William Wilson 66
The Man of the Crowd 84
The Murders in the Rue Morgue 92
Eleonora 123
The Masque of the Red Death 129
The Pit and the Pendulum 135
The Mystery of Marie Rogêt 149
The Tell-Tale Heart 193
The Gold-Bug 198
The Black Cat 230
A Tale of the Ragged Mountains 239
The Purloined Letter 249
The System of Doctor Tarr and Professor Fether 266
The Imp of the Perverse 283
The Cask of Amontillado 289
The Domain of Arnheim 296
Hop-Frog 310
Von Kempelen and his Discovery 319

Explanatory Notes 326
"It is," said Dupin, "and, upon inquiring of the boy by what means he effected the thorough identification in which his success consisted, I received answer as follows: "When I wish to find out how wise, or how stupid, or how good, or how wicked is any one, or what are his thoughts at the moment, I fashion the expression of my face, as accurately as possible, in accordance with the expression of his, and then wait to see what thoughts or sentiments arise in my mind or heart, as if to match or correspond with the expression." This response of the schoolboy lies at the bottom of all the spurious profundity which has been attributed to Rochefoucault, to La Bruyère, to Machiavelli, and to Campanella.*

"And the identification," I said, "of the reasoner's intellect with that of his opponent, depends, if I understand you aright, upon the accuracy with which the opponent's intellect is admeasured."

"For its practical value it depends upon this," replied Dupin; "and the Prefect and his cohort fail so frequently, first, by default of this identification, and, secondly, by ill-admeasurement, or rather through non-admeasurement, of the intellect with which they are engaged. They consider only their own ideas of ingenuity; and, in searching for anything hidden, advert only to the modes in which they would have hidden it. They are right in this much—that their own ingenuity is a faithful representative of that of the mass; but when the cunning of the individual felon is diverse in character from their own, the felon foils them, of course. This always happens when it is above their own, and very usually when it is below. They have no variation of principle in their investigations; at best, when urged by some unusual emergency—by some extraordinary reward—they extend or exaggerate their old modes of practice, without touching their principles. What, for example, in this case of T—, has been done to vary the principle of action? What is all this boring, and probing, and sounding, and scrutinizing with the microscope, and dividing the surface of the building into registered square inches—what is it all but an exaggeration of the application of the one principle or set of principles of search, which are based upon the one set of notions regarding human ingenuity, to which the Prefect, in the long routine of his duty, has been accustomed? Do you not see he has taken it for granted that all men proceed to conceal a letter,—not exactly in a gimlet-hole bored in a chair-leg—but, at least, in some out-of-the-way hole or corner suggested by the same tenor of thought which would urge a man to secrete a letter in a

gimlet-hole bored in a chair-leg? And do you not see also, that such recherché nooks for concealment are adapted only for ordinary occasions, and would be adopted only by ordinary intellects; for, in all cases of concealment, a disposal of the article concealed—a disposal of it in this recherché manner,—is, in the very first instance, presumable and presumed; and thus its discovery depends, not at all upon the acumen, but altogether upon the mere care, patience, and determination of the seekers; and where the case is of importance—or, what amounts to the same thing in the police eyes, when the reward is of magnitude,—the qualities in question have never been known to fail. You will now understand what I meant in suggesting that, had the purloined letter been hidden any where within the limits of the Prefect's examination—in other words, had the principle of its concealment been comprehended within the principles of the Prefect—its discovery would have been a matter altogether beyond question. This functionary, however, has been thoroughly mystified; and the remote source of his defeat lies in the supposition that the Minister is a fool, because he has acquired renown as a poet. All fools are poets; this the Prefect feels; and he is merely guilty of a non distributio mediis in thence inferring that all poets are fools.*

"But is this really the poet?" I asked. "There are two brothers, I know; and both have attained reputation in letters. The Minister I believe has written learnedly on the Differential Calculus. He is a mathematician, and no poet."

"You are mistaken; I know him well; he is both. As poet and mathematician, he would reason well; as mere mathematician, he could not have reasoned at all, and thus would have been at the mercy of the Prefect."

"You surprise me," I said, "by these opinions, which have been contradicted by the voice of the world. You do not mean to set at naught the well-digested idea of centuries. The mathematical reason has long been regarded as the reason par excellence."

""Il y a a parler,"" replied Dupin, quoting from Chamfort, ""que toute idée publique, toute convention reçue, est une sottise, car elle a convenu au plus grand nombre."

"# The mathematicians, I grant you, have done their best to promulgate the popular error to which you allude, and which is none the less an error for its promulgation as truth. With an art worthy a better cause, for example, they have insinuated the term "analysis" into application to algebra. The French are the originators
